# Thermography Medical Clinic

The Future of Preventative Healthcare...Today!

Every person deserves the truth about their state of health. Instead of waiting for symptoms to manifest and a disease process to be diagnosed, Thermography gives you a very early look at the most important indicator of a potential health problem - Inflammation.

Find out if you have inflammation before it becomes a chronic condition.

Visualize your current state of health and receive a clear and powerful report:

- **Baseline Study** profiles each patient's *unique thermal fingerprint*, and visually identifies areas of concern in a clear and powerful report.
- **Follow-up Studies** monitor progress towards optimal health and wellness.
